Q11
i) $\vec{OD}$ is $\vec{OC}$ rotated anticlockwise about the origin by θ

$$\begin{aligned} d &= c \times e^{i\theta} \\ &= c \times w \\ &= wc \end{aligned}$$

ii) $\vec{OA}$ is $\vec{OB}$ rotated clockwise about the origin by θ ($= -\theta$)

$$\begin{aligned} a &= [\cos(-\theta) + i\sin(-\theta)] \times b \\ &= (\cos \theta - i\sin \theta) b \\ &= \bar{w} b \end{aligned}$$

Also $b = \frac{a}{\bar{w}} = wa$

iii) $\vec{AC} = \vec{AO} + \vec{OC}$
 $= -a + c = c - a$

$$\begin{aligned} w\vec{AC} &= wc - wa \\ &= d - b \\ &= \vec{BD} \end{aligned}$$

$$\begin{aligned} |\vec{BD}| &= |w\vec{AC}| \\ &= |w| |\vec{AC}| \end{aligned}$$

$$= 1 \times |\vec{AC}| \quad \text{since } |w| = 1$$

$$\therefore |\vec{BD}| = |\vec{AC}| \text{ as required.}$$
