

Question 1:

a) Evaluate $\int_0^3 \frac{dx}{9+x^2}$ giving your answer in exact form.

1

2

b) Use the table of standard integrals to find the exact value of

2

$$\int_0^4 \frac{dx}{\sqrt{9+x^2}}$$

c) Show that $\frac{1-\cos 2\theta}{\sin 2\theta} = \tan \theta$.

4

Hence express $\tan 67\frac{1}{2}^\circ$ in simplest form.

d) Solve the inequality $x \geq \frac{1}{x}$

4

Question 2:**Marks:**

a) Find the acute angle between the lines $y = \frac{1}{3}x + 3$ and $y = -\frac{2}{3}x + 3$.

2

Give your answer in radians correct to two decimal places.

b) The polynomial $x^3 - 3x + 1 = 0$ has roots α, β and γ . Find the exact value

3

of $\frac{1}{\alpha} + \frac{1}{\beta} + \frac{1}{\gamma}$

c) i) By using graphs or otherwise show that the curves $y = \ln x$ and $y = 2 - x$ have a point of intersection for which the x co-ordinate is close to 1.5.

1

2

ii) Use $x = 1.5$ and one application of Newton's method to find a better approximation of the x co-ordinate of this point of intersection. Give answer correct to two decimal places.

d) Use the substitution $u = x - 1$ to evaluate $\int_2^5 \frac{x+1}{\sqrt{x-1}} dx$

4

Question 3:

a)

In the diagram above $P(2ap, ap^2)$ is a point on the parabola $x^2 = 4ay$. The point Q lies on PS produced such that Q divides PS externally in the ratio 3:2.

i) Prove that Q has co-ordinates $(-4ap, a(3-2p^2))$ 2

ii) Show that as P varies the locus of Q is another parabola. Find its equation and write down the co-ordinates of its vertex and focus in terms of a. 5

b) Prove by mathematical induction that $\sin(x + n\pi) = (-1)^n \sin x$ where n is a positive integer. 5

Question 4:

Marks:

a) Solve for x: $\log_{\frac{1}{2}}\left(\frac{1}{x}\right) \geq \log_2(3x-1)$ 3

A square ABCD of side 1 unit is gradually 'pushed over' to become a rhombus. The angle at A (θ) decreases at a constant rate of 0.1° / second.

i) Show that the area of the rhombus is equal to $\sin \theta$ 1

ii) At what rate is the area of the rhombus ABCD decreasing when 2

$\theta = \frac{\pi}{6}$? (Give answer correct to 2 decimal places).

iii) At what rate is the shorter diagonal of the rhombus ABCD 3

decreasing when $\theta = \frac{\pi}{3}$? (Give answer correct to 2 decimal places).

c) Prove that $\frac{\sin 3\theta}{\sin \theta} - \frac{\cos 3\theta}{\cos \theta} = 2$ (for $\sin \theta \neq 0$, $\cos \theta \neq 0$) 3

Question 5:

a)

- i) Express $\sqrt{3} \cos 2t - \sin 2t$ in the form $R \cos(2t + \alpha)$ where 2

$$0 < \alpha < \frac{\pi}{2}$$

- ii) Hence or otherwise find all positive solutions of 3

$$\sqrt{3} \cos 2t - \sin 2t = 0$$

b) A particle moves in a straight line and is x metres from a fixed point O after t seconds where:

$$x = 5 + \sqrt{3} \cos 2t - \sin 2t$$

- i) Prove that the acceleration of the particle is $-4(x-5)$. 3

- ii) Between which two points does the particle oscillate. 2
(You may use your answers from part (a))

- iii) At what times does the particle first pass through the point $x=5$. 2

Question 6:

Marks:

- a) The acceleration at any time t of a body moving in a straight line is $-e^{-2x}$.

When $t=0$, $x=0$, and $v=1$.

- i) Express its velocity v in terms of x . 3

- ii) Express its displacement x in terms of time t . 3

- b) A garden hose placed at the top of an incline releases a stream of water with a velocity of 8m/s at an angle of 45° with the horizontal. Assuming that $x = vt \cos \alpha$ and $y = vt \sin \alpha - \frac{1}{2}gt^2$ where x and y are the horizontal and vertical displacements of the stream of water from O at any time, $g = 10\text{m/s}^2$ and the coordinate axes are taken as shown.

- i) Show that the equation of the path of the stream of water is given 3

$$\text{by } y = x - \frac{5x^2}{32}$$

- ii) If the stream of water strikes the incline at the point P , 7.6m horizontally from O , find the equation of the incline. 3

Question 7:

- a) During the early summer months the rate of increase of the population P of fruit flies is proportional to the excess of the population over 3000.

$$\frac{dP}{dt} = k(P - 3000) \text{ where } k \text{ is a constant. At the beginning of summer the}$$

population is 4000 and 1 month later it is 10 000.

- i) Show that $P = 3000 + Ae^{kt}$ is a solution of the differential equation, 1
 A is a constant.

- ii) Find the value of A and that of k . 2

- iii) Find to the nearest 100, the population after $2\frac{1}{2}$ months. 1

- iv) After how many weeks does the population reach $\frac{1}{2}$ million? 1
(Give your answer to 1 decimal place).

- b) Consider the function $y = x^3 e^{-x}$

- i) State the greatest possible domain of the function. 1

- ii) Find the maximum value of the function in the domain. 2

- iii) Show that there are 3 points of inflexion and that one of them has a horizontal tangent. 3

- iv) Sketch the curve for $-1 \leq x \leq 6$ 1

b) If $n=1$. $\sin(x+\pi) = \sin x \cos \pi + \cos x \sin \pi$

$$= -\sin x + 0$$

$$= (-1)^1 \sin x$$

$\therefore$ True for $n=1$

COMMENTS

Assume true for $n=k$

$$\text{i.e. } \sin(x+k\pi) = (-1)^k \sin x$$

consider $n=k+1$

$$\sin(x+(k+1)\pi) = \sin(x+k\pi+\pi)$$

$$= \sin(x+k\pi) \cos \pi + \cos(x+k\pi) \sin \pi$$

$$= (-1)^k \sin x \times -1 + 0$$

$$= (-1)^{k+1} \sin x$$

which is of same form as for $n=k$.

$\therefore$ If true for $n=k$, it is also true for $n=k+1$. Since it is true for $n=1$, it is true for $n=2$ and hence all following positive integers.

Question 6.

$$a) (i) \ddot{x} = -e^{-2x}$$

$$\frac{d}{dx} \frac{1}{2} v^2 = -e^{-2x}$$

$$\frac{1}{2} v^2 = \frac{-e^{-2x}}{-2} + C$$

$$\frac{v^2}{2} = \frac{e^{-2x}}{2} + C$$

When $v=1, x=0$

$$\frac{1}{2} = \frac{1}{2} + C \therefore C=0$$

$$v^2 = e^{-2x}$$

$$v = \pm \sqrt{e^{-2x}}$$

Since $v=1$ when $x=0$

$$v = \sqrt{e^{-2x}} = e^{-x}$$

$$(ii) v = e^{-x}$$

$$\frac{dx}{dt} = e^{-x}$$

$$\frac{dt}{dx} = e^x$$

$$t = e^x + C$$

When $t=0, x=0 \therefore C=-1$

$$t = e^x - 1$$

$$e^x = t + 1$$

$$x = \ln(t+1)$$

Most students who used $\ddot{x} = \frac{d}{dx}(\frac{1}{2}v^2)$ performed well on this question. However, many did not explain why v is the positive square root.

Some students used $\frac{dx}{dt}$ correctly but did not make x the subject. Some used an incorrect formula from (i) and could not achieve a final result.
