See separate sheet.

- (i) $y = -f(x)$. 1
- (ii) $y = f(-x)$. 2
- (iii) $y = f(x^2)$. 2
- (b) (i) Show that the equation of the tangent to the polynomial function $y = P(x)$ at $x = \alpha$ is $y = P'(\alpha)(x - \alpha) + P(\alpha)$. 1

For $P(1)$:

$$\text{LHS} = \tan \theta_1 \quad \text{RHS} = \tan \theta_1$$

$\therefore P(1)$ is true

Assume $P(n)$ is true up to some integer $k \geq 1$

$$\text{i.e. } S_k = \theta_1 + \theta_2 + \dots + \theta_k < \frac{\pi}{2} \text{ and}$$

(ii) $r = 80$, $\theta = 45^\circ$, $g = 10$ $F \leq \frac{N}{9}$
So min. speed when $F = \frac{N}{9}$ or $N = 9F$
