## MATHEMATICS

### Final Preliminary Examination

Friday 3<sup>rd</sup> August 2012

#### General Instructions

- Reading time – 5 minutes
- Working time - 2½ hours
- Write using black or blue pen
- Board approved calculators may be used
- A table of standard integrals is provided at the back of this paper
- All necessary working should be shown in every question
- Start a new booklet for each question

#### Total Marks – 85

- Attempt questions 1 – 15
- Answer questions 1 – 10 on the multiple choice answer sheet provided
- For questions 11 – 15 start each question in a new booklet

| Question Number | Mark        |
|-----------------|-------------|
| 1 – 10          | / 10        |
| 11              | / 15        |
| 12              | / 15        |
| 13              | / 15        |
| 14              | / 15        |
| 15              | / 15        |
| <b>TOTAL:</b>   | <b>/ 85</b> |

1. A battleship A is 260 km due west of a lighthouse L. It travels a distance of 120 km on a bearing of  $N62^{\circ}15'E$  to position C.

NOT TO SCALE

The distance from the lighthouse to the battleships position at C is:

- (A)  $\sqrt{260^2 - 120^2}$   
 (B)  $\sqrt{120^2 + 260^2 - 2 \times 120 \times 260 \times \cos 62^{\circ}15'}$   
 (C)  $\sqrt{260^2 + 120^2 - 2 \times 260 \times 120 \cos 27^{\circ}45'}$   
 (D)  $\frac{\sin 27^{\circ}45' \times 260}{\sin 62^{\circ}15'}$

2. Evaluate  $x$ .

NOT TO SCALE

- (A)  $56^{\circ}$   
 (B)  $92^{\circ}$   
 (C)  $69^{\circ}$   
 (D)  $50^{\circ}$

3. For the quadratic equation  $y = ax^2 + bx + c$  and where  $a > 0$ . The minimum value will be:

- (A)  $\frac{4ac - b^2}{4a}$   
 (B) Negative  
 (C)  $\frac{4ac + b^2}{4a}$   
 (D)  $\frac{b^2 - 4ac}{2a}$

4. The percentage of sugar in a proposed drink is 6.8%. The health authority wants this to be reduced to less than 2.475%. What is the least amount of water that needs to be added to 1 litre of this drink in order to achieve this requirement?

(A) 2747 mls  
(B) 1750 mls  
(C) 2750 mls  
(D) 1747 mls

5. Which of the following answers is equivalent to  $2(2^k - 1) + 2^{k+1}$ ?

(A)  $2^{k+2} - 1$   
(B)  $4^{k+1} - 2$   
(C)  $4^k - 2$   
(D)  $2(2^{k+1} - 1)$

6. Write  $\frac{3}{\sqrt{5}-\sqrt{2}} + \frac{5}{\sqrt{5}+\sqrt{2}} - \frac{\sqrt{3}+3}{\sqrt{3}}$  as a single fraction

(A)  $\frac{8\sqrt{5} + 8\sqrt{2} - 3 - 3\sqrt{3}}{3}$   
(B)  $\frac{8\sqrt{5}+8\sqrt{2}-3+3\sqrt{3}}{3}$   
(C)  $\frac{8\sqrt{5}-2\sqrt{2}-3-3\sqrt{3}}{3}$   
(D)  $8\sqrt{5} - 2\sqrt{2} - 1 - \sqrt{3}$

7. The solutions to the following equation  $|2x - 5| + |x + 3| = 13$  are:

(A)  $x = 5, 21$   
(B)  $x = -5, -\frac{11}{3}$   
(C)  $x = \frac{-11}{3}, 21$   
(D)  $x = 5, \frac{-11}{3}$

8. Which of the following answers only includes functions:

(A) 1, 3, 7, 8

(B) 4, 5, 7, 9

(C) 2, 4, 6, 8

(D) 1, 4, 7, 8

9. Complete the square  $9x^2 + 16x$
- (A)  $9x^2 + 16x + 64$
- (B)  $x^2 + 16x + 64$
- (C)  $x^2 + \frac{16x}{9} + \frac{64}{81}$
- (D)  $x^2 + \frac{16x}{9} + \frac{64}{9}$
10. Solve  $\sqrt{3} \tan 2x - 1 = 0$  for  $-180^\circ \leq x \leq 180^\circ$
- (A)  $30^\circ, -150^\circ$
- (B)  $30^\circ, 210^\circ, -150^\circ, -330^\circ$
- (C)  $15^\circ, -75^\circ$
- (D)  $15^\circ, 105^\circ, -75^\circ, -165^\circ$

*End of multiple choice section*

ANSWER QUESTIONS 11 – 15 IN THE ANSWER BOOKLETS PROVIDED.

Question 11 (15 marks) Use a SEPARATE writing booklet.

Marks:

(a) Simplify  $8\sqrt{48} + 2\sqrt{3}$  2

(b) Rationalise the denominator  $\frac{\sqrt{5}}{2\sqrt{5}+3}$  2

(c) Express 0.00001055721 in scientific notation correct to 3 significant figures. 2

(d) Evaluate  $\frac{\sqrt[3]{3.92}}{(19.24)^2 - 5.7}$  correct to 3 decimal places. 2

(e) Solve the equation  $(x - 3)^2 = 4$  2

ABCD is a rhombus, AX is perpendicular to BC and intersects BD at L.

(i) Copy the diagram into your examination booklet and state why  $\angle ADB = \angle CDB$ . 1

(ii) Prove that the triangles ALD and CLD are congruent. 2

(iii) Show that  $\angle DAL$  is a right angle. 1

(iv) Hence, or otherwise, find the size of  $\angle LCD$ , giving reasons. 1

**Question 12** (15 marks) Use a SEPARATE writing booklet.

**Marks:**

(a) Express  $1.0\dot{2}\dot{6}$  as a simple fraction. 2

(b) A triangle has sides 7cm, 10cm and 12cm in length. Find the size of the smallest angle, to the nearest degree. 2

The diagram shows a point  $P$  which is 30 km due west of the point  $Q$ . The point  $R$  is 12 km from  $P$  and has a bearing from  $P$  of  $070^\circ$ .

(i) Find the distance of  $R$  from  $Q$ , correct to the nearest km. 2

(ii) Hence find the bearing of  $R$  from  $Q$ . 2

(d) Simplify  $\frac{5b}{2b+6} \div \frac{b^2}{b^2+b-6} - \frac{b}{b+1}$  3

(e) Solve for  $x$ :  $2^x \times 4^{x+1} = 0.5$  2

(f) Solve simultaneously:

$$3x - 4y = 13$$

$$2x - y = 7$$

2

**Question 13** (15 marks) Use a SEPARATE writing booklet.

**Marks:**

- (a) Solve the inequation  $\frac{x}{5} - \frac{x}{2} \geq 3$  and graph the solution on a number line. 3

- (b) A formula used in Physics to determine the acceleration,  $f$ , of a simple pulley system with masses  $M$  and  $m$  at each end is:

$$f = \frac{(M - m)g}{(M + m)}$$

Make ' $m$ ' the subject of this formula. 2

- (c) Find the exact value of  $\cot 300^\circ$ . 1

- (d) If  $\sin A = -\frac{2}{3}$  and  $\tan A < 0$ , find the exact value of  $\sec A$ . 2

- (e) Show that  $\frac{1}{\sin^2 \vartheta} + \frac{1}{\cos^2 \vartheta} = \sec^2 \vartheta \operatorname{cosec}^2 \vartheta$ . 3

- (f) On separate axes, draw neat sketches of the following graphs, showing any important features: 4

(i)  $y = |x + 2|$

(ii)  $y = 2 + \frac{1}{x}$

**Question 14** (15 marks) Use a SEPARATE writing booklet.

**Marks:**

(a) A function  $f$  is defined as  $f(x) = x^2 - 5x + 1$ .

(i) Write an expression for  $f(2x)$  1

(ii) Solve the equation:  $f(2x) = f(x)$  2

(b) Find the centre and radius of the circle:  $x^2 - 2x + y^2 + 6y - 12 = 0$  2

(c) Draw a graph which does not represent a function. By referring to your graph, explain why it is not a  $fn$ . 1

(d) NOT TO SCALE

(i) Prove  $\triangle ADE$  is similar to  $\triangle ACB$ . 3

(ii) Hence find the length BC. 1

(e) Find the size of an interior angle of a regular 12 sided polygon. 2

(f) Bricks are ordered in lots of 500. 10% are too badly chipped to be used. If a builder requires 14,500 bricks for a job, what is the minimum number of bricks that he must order? 3

**Question 15** (15 marks) Use a SEPARATE writing booklet.

**Marks:**

- (a) Given that  $f(x) = 2^x + 2^{-x}$ , determine whether  $f(x)$  is even, odd or neither. Give reasons.

2

- (b) A function is defined by the rule

$$g(x) = \begin{cases} 1 & \text{if } x \leq 0 \\ x & \text{if } 0 < x < 3 \\ 16 - x^2 & \text{if } x \geq 3 \end{cases}$$

- (i) Sketch this function on a number plane from  $x = -4$  to  $x = 4$

2

- (ii) Evaluate  $g(-3) + g(1) + g(4)$

1

- (iii) Find the range of this function for  $-4 \leq x \leq 4$

1

- (c) In the diagram below  $AD \parallel BC$ .

2

Copy the diagram onto your worksheet and find the value of  $x$ , giving reasons.

Question 15 continued:

Marks:

- (d) In the diagram ABCDE is a regular pentagon and AB and DC produced meet at X. The point Y lies on DCX produced.

- (i) Copy the diagram on to your paper.  
(ii) Find the size of  $\angle BXY$  giving reasons.

3

(e)

The diagram above shows a triangle ABC, and CD is perpendicular to AB. It is given that  $BC = a$ ,  $AC = b$ ,  $\angle ACD = \beta$  and  $\angle BCD = \alpha$ .

- (i) By using triangles ACD and BCD, show that  $h = b \cos \beta = a \cos \alpha$ . 1  
(ii) Show that the area of triangle ACD is equal to  $\frac{1}{2} ab \sin \beta \cos \alpha$ . 1  
(iii) Find another expression for the area of triangle BCD in terms of  $a$ ,  $b$ ,  $\alpha$  and  $\beta$ . 1  
(iv) Show that the area of triangle ABC is equal to  $\frac{1}{2} ab \sin(\alpha + \beta)$  1

End of paper

## STANDARD INTEGRALS

$$\int x^n dx = \frac{1}{n+1} x^{n+1}, \quad n \neq -1; \quad x \neq 0, \text{ if } n < 0$$

$$\int \frac{1}{x} dx = \ln x, \quad x > 0$$

$$\int e^{ax} dx = \frac{1}{a} e^{ax}, \quad a \neq 0$$

$$\int \cos ax dx = \frac{1}{a} \sin ax, \quad a \neq 0$$

$$\int \sin ax dx = -\frac{1}{a} \cos ax, \quad a \neq 0$$

$$\int \sec^2 ax dx = \frac{1}{a} \tan ax, \quad a \neq 0$$

$$\int \sec ax \tan ax dx = \frac{1}{a} \sec ax, \quad a \neq 0$$

$$\int \frac{1}{a^2 + x^2} dx = \frac{1}{a} \tan^{-1} \frac{x}{a}, \quad a \neq 0$$

$$\int \frac{1}{\sqrt{a^2 - x^2}} dx = \sin^{-1} \frac{x}{a}, \quad a > 0, \quad -a < x < a$$

$$\int \frac{1}{\sqrt{x^2 - a^2}} dx = \ln \left( x + \sqrt{x^2 - a^2} \right), \quad x > a > 0$$

$$\int \frac{1}{\sqrt{x^2 + a^2}} dx = \ln \left( x + \sqrt{x^2 + a^2} \right)$$

NOTE:  $\ln x = \log_e x$ ,  $x > 0$

Final Preliminary Examination

Friday 3<sup>rd</sup> August 2012

### General Instructions

- Reading time – 5 minutes
- Working time – 2½ hours
- Write using black or blue pen
- Board approved calculators may be used
- A table of standard integrals is provided at the back of this paper
- All necessary working should be shown in every question
- Start a new booklet for each question

### Total Marks – 85

- Attempt questions 1 – 15
- Answer questions 1 – 10 on the multiple choice answer sheet provided
- For questions 11 – 15 start each question in a new booklet

| Question Number | Mark        |
|-----------------|-------------|
| 1 – 10          | / 10        |
| 11              | / 15        |
| 12              | / 15        |
| 13              | / 15        |

10. A ☐ B ☐ C ☐ D ☒

Question 11

Start here

a)  $8\sqrt{48} + 2\sqrt{3}$  Generally well done, though  
 $= 8 \times 4\sqrt{3} + 2\sqrt{3}$  at least half-a-dozen students  
 $= 32\sqrt{3} + 2\sqrt{3}$  ① said that  $32+2=35$  (very  
 $= 34\sqrt{3}$  ① careless mistake which cost  
a mark)

b)  $\frac{\sqrt{5}}{2\sqrt{5}+3} \times \frac{2\sqrt{5}-3}{2\sqrt{5}-3}$  ① Generally well done.  
 $= \frac{10-3\sqrt{5}}{20-9}$  Some students did not  
 $= \frac{10-3\sqrt{5}}{11}$  ① multiple  $\sqrt{5}$  by both  $2\sqrt{5}$  and  $-3$   
in the numerator and ended up  
with  $\frac{7}{11}$  as their answer.

c)  $0.00001055721$  • Generally well done.  
 $= 1.06 \times 10^{-5}$  ②  
1 mark for correct rounding  
1 mark for correct power

d)  $\frac{\sqrt[3]{3.92}}{(19.24)^2 - 5.7}$  = 0.004 • Generally well  
done! ②  
deduct 1 mark for  
incorrect n°. of decimal places.

e)  $(x-3)^2 = 4$  • Generally well done.  
 $x-3 = \pm 2$  ① • Many students did it as  
 $x^2 - 6x + 9 = 4$   
 $x = \pm 2 + 3$   $x^2 - 6x + 5 = 0$   
 $= 1 \text{ or } 5$  ①  $(x-5)(x-1) = 0$  ①  
 $x = 5 \text{ or } 1$  ①

f)  i)  $\angle ADX = \angle CDB$  (diagonals  
of a rhombus bisect  
angles at the vertices) ①  
• many students did not  
know this or did not  
make this statement clearly.  
• many students managed to  
prove it in other ways  
but it was only worth 1 mark.

ii) In  $\Delta$ 's  $AXD$  and  $CXB$   
 $DX$  is common  
 $\angle ADX = \angle CDB$  (from part (i)) ① • Generally  
 $AD = CB$  (equal sides of rhombus) well done!  
 $\therefore \Delta AXD \cong \Delta CXB$  (SAS) ①

iii)  $\angle DAX = \angle ACB$  (alternate angles,  $AD \parallel BC$ ) ①  
 $= 90^\circ$  since  $AX \perp BC$   
• Many students still do not  
mention parallel lines when  
they say alternate angles.

iv)  $\angle LCD = \angle DAX$  (corresponding angle of  
congruent triangles) ①  
 $= 90^\circ$   
• Many students don't give  
the correct reason or don't  
state it correctly.

Additional writing space on back page.

## Question 12

a) Let  $x = 1.02626...$   
 $10x = 10.2626...$   
 $1000x = 1026.2626...$   
 $990x = 1016$   
 $x = \frac{1016}{990}$   
 $x = \frac{508}{495} = 1\frac{13}{495}$

$A = \cos^{-1} 0.8125...$   
 $= 36^\circ$  (to nearest degree)

i)  $RQ = \sqrt{12^2 + 30^2 - 2 \times 12 \times 30 \cos 20}$   
 $= 19 \text{ km (nearest km)}$

## Answers.

★ Many students did not multiply by 1000, choosing 100.

① for this statement or similar

① for simplifying the fraction

① for correct substitution

★ Must not list all angles & then not specify which is smallest.

① for correct angle.

★ Common to mistake  $\angle RPA = 30^\circ$

① for correct substitution

① for correct answer.

d)  $\frac{\sin Q}{12} = \frac{\sin 20^\circ}{19.168...}$

$Q = \sin^{-1} \left( \frac{12 \times \sin 20^\circ}{19.168...} \right)$   
 $= 12^\circ 22'$  (nearest minute)

Bearing of R from Q is  
 $(270 + 12^\circ 22')$   
 $= 282^\circ 22' T$

d)  $\frac{5b}{2(b+3)} \times \frac{(b+3)(b-2)}{b^2} - \frac{b}{b+1}$   
 $= \frac{5(b-2)}{2b} - \frac{b}{b+1}$   
 $= \frac{5(b-2)(b+1) - 2b^2}{2b(b+1)}$   
 $= \frac{5b^2 - 5b - 10 - 2b^2}{2b(b+1)}$   
 $= \frac{3b^2 - 5b - 10}{2b^2 + 2b}$

★ Must use unrounded version of RQ. Using 19 gives incorrect answer.

① for correct substitution

① for correctly rounded answer for the bearing.

★ Some students forgot to find the bearing

① for changing to inverse multiplication.

① for expressing as one fraction

① for simplified answer.

e)  $2^x \times 4^{x+1} = 0.5$   
 $2^x \times 2^{2x+2} = 2^{-1}$   
 $3x+2 = -1$   
 $3x = -3$   
 $x = -1$

f)  $3x - 4y = 13$  - ①  
 $2x - y = 7$  - ②  $\times 4 \Rightarrow$  ③

$8x - 4y = 28$  ③ subtract  
 $3x - 4y = 13$  ①

$5x = 15$   
 $x = 3$   
 sub into ②  
 $2(3) - y = 7$   
 $6 - y = 7$   
 $-y = 1$   
 $y = -1$

① for re-writing 0.5 as  $2^{-1}$   
 \* Trial and error still needs working  
 ① for final answer.

① for evidence of either method (substitution or addition/subtraction)

\* Too many students decided  
 $\boxed{5x=15}$   
 $x=3$  - This simple mistake cost many marks

① for both answers.

| Start here Question 13 |                                                                                                                                                                                                 |                                                                                                                                                                                                                                                        |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| a)                     | $\frac{x}{5} - \frac{x}{2} \geq 3$<br>$2x - 5x \geq 30$<br>$-3x \geq 30$ (1 mark)<br>$x \leq -10$ 1 mark<br> | Simplifies the inequality 1 mark.<br>You must <del>show</del> draw the number line with a ruler; Show an even scale with at least one point on either side of -10.<br>Makes x subject of the formula 1 mark.<br>Shows the solution on the number line. |
| b)                     | $f = \frac{(M-m)g}{M+m}$<br>$f(M+m) = (M-m)g$<br>$fM + fm = Mg - mg$<br>$fm + mg = Mg - fM$<br>$m(f+g) = M(g-f)$<br>$\therefore m = \frac{M(g-f)}{f+g}$                                         | 1 mark: writes the formula without the denominator.<br>Most students did this part right.<br>1 mark: Correctly makes m subject of the formula.<br>Many students had 'm' on both sides of the formula.                                                  |

| b) $x^2 - 2x + y^2 + 6y - 12 = 0$<br>$x^2 - 2x + (-1)^2 + y^2 + 6y + (3)^2 = 22$<br>$(x-1)^2 + (y+3)^2 = 22$<br>centre $(1, -3)$ $\left(\frac{1}{2}\right)$<br>Radius $= \sqrt{22}$ $\left(\frac{1}{2}\right)$                                                                                              | Careless mistakes $\sqrt{2}$ instead of $\sqrt{22}$ and $(-1, 3)$ instead of $(1, -3)$ .                         |
| c) Draw a graph and explain why B is not a function $\left(\frac{1}{1}\right)$                                                                                                                                                                                                                              | well done, only 2 students made mistake on this!                                                                 |
| d) Prove $\triangle ADE \parallel \triangle ACB$<br>$\frac{AD}{AC} = \frac{3}{6}$ and $\frac{AE}{AB} = \frac{4}{8}$ $\left(\frac{1}{3}\right)$<br>Also the included angle A is common. $\left(\frac{1}{3}\right)$<br>Two sides are proportional and the included angle is equal. $\left(\frac{1}{3}\right)$ | well done in included angle A.<br>Small percent forgot to mention included angle is equal.                       |

|                                                                                                                                                    |                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| (ii) $\frac{Bc}{3.2} = \frac{2}{1}$<br>$Bc = 6.4$ $\left(\frac{1}{1}\right)$                                                                       | well done!                                                                                   |
| e) $\frac{(n-2)180}{n} = \frac{(12-2)180}{12}$ $\left(\frac{1}{2}\right)$<br>$= 150^\circ$ $\left(\frac{1}{2}\right)$                              | well done!                                                                                   |
| f) Good bricks = 450 per lot<br>$\frac{14500}{450} = 32.2$ $\left(\frac{1}{3}\right)$<br>$\therefore$ he orders 33 lots $\left(\frac{1}{3}\right)$ | $\approx 5\%$ of students did not calculate the minimum number of bricks that he must order. |
| Minimum number is<br>$33 \times 450$<br>$= 16500$ bricks $\left(\frac{1}{3}\right)$                                                                |                                                                                              |

a)  $f(x) = 2^x + 2^{-x}$   
 $f(-x) = 2^{-x} + 2^x$  ①  
 Since  $f(x) = f(-x)$  ①  
 Function is EVEN ①

b)  $g(-3) + g(1) + g(4) = 1 + 1 + 0$   
 $= 2$  ①

iii) Range:  $0 \leq y \leq 7$  ①  
 kids find it is difficult to find the range of discontinuous function

c)  $\angle ABC = 59^\circ$   
 (co-interior  $\angle$ 's,  $AD \parallel BC$ )  
 $\angle ABC = \angle EBF$  (vertically opposite angles) ①  
 No reason or incorrect reason -1  
 $x + 59 + 42 = 180$   
 (angle sum of  $\Delta$ )  
 $x = 79^\circ$  ①

d)  $\angle CBX = \angle BCX$  (Exterior angles of regular pentagon) ①  
 Exterior angle =  $\frac{360}{5}$   
 $= 72^\circ$  ✓ ①

$\angle BXY = 144^\circ$  (Exterior angle of  $\Delta$  equals sum of 2 opposite interior angles) ①

e) i) In  $\Delta ABC$ ,  $\cos \beta = \frac{h}{b} \therefore h = b \cos \beta$   
 In  $\Delta BCD$ ,  $\cos \alpha = \frac{h}{a} \therefore h = a \cos \alpha$   
 $\therefore h = b \cos \beta = a \cos \alpha$  ①

ii) Area of  $\Delta ACD = \frac{1}{2} AC \times CD \sin \beta$   
 $= \frac{1}{2} \times b \times h \sin \beta$   
 $= \frac{1}{2} \times b \times a \cos \alpha \times \sin \beta$   
 $= \frac{1}{2} ab \sin \beta \cos \alpha$  ①

iii) Area of  $\Delta BCD = \frac{1}{2} \times a \times h \sin \alpha$   
 $= \frac{1}{2} \times a \times b \cos \beta \sin \alpha$   
 $= \frac{1}{2} ab \cos \beta \sin \alpha$  ①

iv) Area of  $\Delta ACB =$   
 $\frac{1}{2} \times AC \times BC \sin (\alpha + \beta)$   
 $= \frac{1}{2} ab \sin (\alpha + \beta)$  ①  
 quite a few add (ii) + (iii) to get  $A = \frac{1}{2} ab (\sin \alpha \cos \beta + \cos \alpha \sin \beta)$

if you need more space to answer this question, they must have this factorization step

most kids did poorly. Not labelling x & y axis, } -1 No scale on axis, }
