

GIRRAWEE HIGH SCHOOL

MATHEMATICS ADVANCED

YEAR 11

Yearly Examination

2022

Reading time: 10 minutes

Working time: 120 minutes

Instructions:

- Attempt ALL questions.
- For Questions 1 to 5, colour in the bubble next to the letter corresponding to the correct response on the MC answer sheet.
- For Questions 6 to 12:
 - All necessary working should be shown in the space provided.
 - Marks will be deducted for careless or badly arranged work.
 - Board-approved calculators may be used.
 - Reference sheet is provided.
 - Diagrams are NOT to scale.

Section I (5 marks)

- Use the multiple-choice answer sheet provided (after MC Q5) for questions 1 – 5.

1. Which of the following is true for the function $f(x) = 8x^3 - 7x$?

- A. Odd function
- B. Even function
- C. Neither odd or even
- D. Zero function

2. Which of following is an expression for $\cos^2 x + \sin^2 x + \tan^2 x$?

- A. 2
- B. $\operatorname{cosec}^2 x$
- C. $\cot^2 x$
- D. $\sec^2 x$

3. Which of the following is equivalent to $\frac{1}{2\sqrt{5} + 3}$?

- A. $\frac{2\sqrt{5} + 3}{-11}$
- B. $\frac{2\sqrt{5} - 3}{17}$
- C. $\frac{2\sqrt{5} - 3}{11}$
- D. $\frac{2\sqrt{5} + 3}{11}$

4. Which diagram is the graph of $y = 2 - (x - 3)^3$?

A.

B.

C.

D.

5. What is the solution to the equation $\log_3(2x - 5) = 2$?

- A. $x = 1$ B. $x = \frac{13}{2}$ C. $x = \frac{11}{2}$ D. $x = 7$

Select the alternative A, B, C or D that best answers the question.

- | | | | |
|----------------------------|--------------------------|--------------------------|--------------------------|
| 1. A ☐ | B. ☐ | C. ☐ | D. ☐ |
| 2. A ☐ | B. ☐ | C. ☐ | D. ☐ |
| 3. A ☐ | B. ☐ | C. ☐ | D. ☐ |
| 4. A ☐ | B. ☐ | C. ☐ | D. ☐ |
| 5. A ☐ | B. ☐ | C. ☐ | D. ☐ |

Section II (98 marks)

- Answer questions in the spaces provided.
- Your responses should include relevant mathematical reasoning and/or calculations.
- Extra writing space is provided at the back of this booklet. If you use this space, indicate in the writing space under the question, the page number on which your solution continues, and clearly write the question number on the extra writing space.

Question 6 (13 marks)

a. Simplify:

(i) $\frac{x}{4} + \frac{x-3}{5}$ [2]

.....

.....

.....

.....

(ii) $\frac{3x-4y}{20y-15x}$ [2]

.....

.....

.....

.....

.....

(iii) $\frac{x-3}{x^2+4x+3} - \frac{x}{x+3}$ [3]

.....

.....

.....

.....

.....

.....

.....

(iv) $\frac{x^4-x^2}{x-1}$ [3]

.....

.....

.....

.....

.....

.....

b. Find the integers a and b such that $(2\sqrt{3}-1)^2 = a\sqrt{3} + b$ [3]

.....

.....

.....

.....

.....

.....

Question 7 (15 marks)

a. Solve:

(i) $|4x - 3| = 5$ [2]

.....

.....

.....

.....

.....

(ii) $5x - \frac{10}{x} = 4$ [2]

.....

.....

.....

.....

.....

.....

.....

b. Find the values of k for which the equation $x^2 + (k - 6)x + 1 = 0$ has equal roots. [3]

.....

.....

.....

.....

.....

.....

c. A circle has the equation $x^2 - 2x + y^2 + 6y = 6$.

- (i) Find the radius and the coordinates of the centre of the circle. [3]

.....

.....

.....

.....

.....

- (ii) Sketch the circle, clearly showing the centre and radius. [2]

d. A function $y = f(x)$ is defined as:

$$f(x) = \begin{cases} x - 3 & \text{for } x \leq -3 \\ 2x + 2 & \text{for } -3 < x < 0 \\ x^2 & \text{for } x \geq 0 \end{cases}$$

(i) Evaluate $f(-7)$ [1]

.....

.....

(ii) Evaluate $f(2) + f(-2) + f(-5)$ [2]

.....

.....

.....

Question 8 (14 marks)

a. Differentiate $f(x) = x^2 - 4x$ from first principles. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

b. Differentiate:

(i) $y = 5 - 7x + 13x^4$ [1]

.....

.....

(ii) $y = 2\sqrt{x}$ [2]

.....

.....

.....

(iii) $y = (2x - 3)^8$ [2]

.....

.....

.....

(iv) $y = x(1 - x)^6$ [3]

.....

.....

.....

.....

.....

.....

.....

(v) $y = \frac{x^2 + 2}{3x - 4}$ [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

Question 9 (15 marks)

a. The line l_1 passes through the point $(9, -4)$ and has gradient $\frac{1}{3}$.

(i) Find the equation of l_1 in general form. [2]

.....

.....

.....

.....

.....

.....

(ii) Line l_2 passes through the origin and has gradient -2 .
Find the coordinates of P , the point of intersection of lines l_1 and l_2 . [2]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (iii) Given that l_1 crosses the y -axis at the point C ,
 calculate the area of ΔOPC . [3]
(You may draw a diagram in the space below to help you answer the question)

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- b. Given that $\sin \theta = \frac{5}{6}$ and $90^\circ \leq \theta \leq 180^\circ$, find the value of $\cos \theta$. [2]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

Question 10(13 marks)

- a. Find the value of x where $BD = 55$ cm.

[3]

Answer correct to 3 significant figures.

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- b. A newly launched weather balloon is floating in the air vertically h metres above the point P on the ground. Observer A is due south of the balloon and notes that its angle of elevation is 58° . Observer B is 150 metres from Observer A and due east of the weather balloon. The angle of elevation of the weather balloon from Observer B is 67° .

$$PA = h \cot 58^\circ \text{ and } PB = h \cot 67^\circ. \quad [2]$$

.....

.....

.....

.....

.....

.....

.....

.....

[illegible]

.....

.....

.....

- c. A small segment of a circle has been removed as shown below.
 The circle has a centre O and radius 0.9 metres.
 The length of the straight edge AB is also 0.9 metres.

Not to scale

.....

.....

.....

.....

- (ii) Find the area of ΔAOB . [1]

.....

.....

.....

.....

- (iii) Find the area of the minor sector AOB . [1]

.....

.....

.....

.....

- (iv) Hence, find the area of the shaded region. [2]

.....

.....

.....

.....

.....

.....

.....

.....

Question 11 (17 marks)

a. Simplify: $\left(\frac{12x^{-3}y^2}{xyz^{\frac{1}{2}}} \right)^2 \div \frac{6x^2y^3}{z^{-4}}$ [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

b. Solve:

(i) $5^{1-x} = 25^x$ [2]

.....

.....

.....

.....

(ii) $\log_4(2x) - \log_4(x + 1) = 0$ [2]

.....

.....

.....

.....

.....

c. Given that $\log_a 4 = 1.5$ and $\log_a 5 = 1.7$, find:

(i) $\log_a 1.25$ [1]

.....

.....

.....

.....

(ii) $\log_a 2$ [1]

.....

.....

.....

.....

(iii) $\log_a 100$ [2]

.....

.....

.....

.....

.....

.....

d. Differentiate $y = \frac{e^{2x} + 4}{x^3}$ [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- e. Find the equation of the tangent to the curve $y = e^{1-2x}$
at the point where $x = 0.5$

[3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

Question 12 (11 marks)

- a. A tank initially has 3000 litres of water and is leaking according to the formula

$$V = V_0 e^{-0.135t} \text{ where } t \text{ is in hours.}$$

- (i) Find the value of V_0 . [1]

.....

.....

.....

- (ii) Find the value of V after 5 hours. [1]
Give your answer correct to 1 decimal place.

.....

.....

.....

.....

- (iii) Find the time taken for the volume of water to fall to 250 litres. [3]
Give your answer to the nearest minute.

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- b. (i) Factorise the expression $2x^2 - x - 1$. [2]

.....

.....

.....

.....

.....

- (ii) Hence, solve the equation
 $2 \sin^2 2x - \sin 2x = 1$ for $0^\circ \leq x \leq 360^\circ$. [4]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

End of Examination

Extra working out paper

If you use this space, please clearly number the question you are answering.

This image shows a full page of a handwriting practice worksheet. It consists of multiple sets of three horizontal dotted lines, providing a guide for letter height and placement. The lines are evenly spaced across the entire page, leaving ample room for writing practice. There is no text or other markings on the page.

This image shows a full page of white paper with horizontal dashed lines, typical of primary-ruled notebook paper. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

This image shows a full page of white paper with horizontal dashed lines, typical of primary-ruled notebook paper. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Solutions

**GIRRAWEEEN HIGH SCHOOL
MATHEMATICS ADVANCED
YEAR 11**

**Yearly Examination
2022**

Reading time: 10 minutes

Working time: 120 minutes

Instructions:

- Attempt ALL questions.
- For Questions 1 to 5, colour in the bubble next to the letter corresponding to the correct response on the MC answer sheet.
- For Questions 6 to 12:
 - All necessary working should be shown in the space provided.
 - Marks will be deducted for careless or badly arranged work.
 - Board-approved calculators may be used.
 - Reference sheet is provided.
 - Diagrams are NOT to scale.

Section I (5 marks)

- Use the multiple-choice answer sheet provided (after MC Q5) for questions 1 – 5.

1. Which of the following is true for the function $f(x) = 8x^3 - 7x$?

☒ A. Odd function

B. Even function

C. Neither odd or even

D. Zero function

$$\begin{aligned} f(-x) &= 8(-x)^3 - 7(-x) \\ &= -8x^3 + 7x \\ &= -(8x^3 - 7x) \\ &= -f(x) \\ &\therefore \text{odd} \end{aligned}$$

2. Which of following is an expression for $\cos^2 x + \sin^2 x + \tan^2 x$?

A. 2

B. $\operatorname{cosec}^2 x$

C. $\cot^2 x$

☒ D. $\sec^2 x$

$$\underbrace{\cos^2 x + \sin^2 x}_{1} + \tan^2 x$$

3. Which of the following is equivalent to $\frac{1}{2\sqrt{5} + 3}$? $\times \frac{2\sqrt{5} - 3}{2\sqrt{5} - 3}$

A. $\frac{2\sqrt{5} + 3}{-11}$

B. $\frac{2\sqrt{5} - 3}{17}$

☒ C. $\frac{2\sqrt{5} - 3}{11}$

D. $\frac{2\sqrt{5} + 3}{11}$

$$= \frac{2\sqrt{5} - 3}{20 - 9}$$

4. Which diagram is the graph of $y = 2 - (x - 3)^3$?

A.

B.

C.

D.

5. What is the solution to the equation $\log_3(2x - 5) = 2$?

$$\begin{aligned} 2x - 5 &= 3^2 \\ 2x &= 14 \end{aligned}$$

A. $x = 1$

B. $x = \frac{13}{2}$

C. $x = \frac{11}{2}$

D. $x = 7$

Select the alternative A, B, C or D that best answers the question.

1. A ☒

C. ☐

D. ☒

Section II (98 marks)

- Answer questions in the spaces provided.
- Your responses should include relevant mathematical reasoning and/or calculations.
- Extra writing space is provided at the back of this booklet. If you use this space, indicate in the writing space under the question, the page number on which your solution continues, and clearly write the question number on the extra writing space.

Question 6 (13 marks)

a. Simplify:

(i) $\frac{x}{4} + \frac{x-3}{5}$ [2]

$$\begin{aligned} &= \frac{5x + 4(x-3)}{20} \\ &= \frac{5x + 4x - 12}{20} \\ &= \frac{9x - 12}{20} \end{aligned}$$

(ii) $\frac{3x-4y}{20y-15x}$ [2]

$$\begin{aligned} &= \frac{3x-4y}{5(4y-3x)} \\ &= \frac{3x-4y}{-5(3x-4y)} \\ &= \frac{-1}{5} \end{aligned}$$

$$(iii) \quad \frac{x-3}{x^2+4x+3} - \frac{x}{x+3} \quad [3]$$

$$= \frac{x-3}{(x+1)(x+3)} - \frac{x}{x+3}$$

$$= \frac{x-3 - x(x+1)}{(x+1)(x+3)}$$

$$= \frac{x-3 - x^2 - x}{(x+1)(x+3)}$$

$$= \frac{-x^2 - 3}{(x+1)(x+3)}$$

$$(iv) \quad \frac{x^4 - x^2}{x-1} \quad [3]$$

$$= \frac{x^2(x^2-1)}{x-1}$$

$$= \frac{x^2(x+1)(x-1)}{x-1}$$

$$= x^2(x+1)$$

$$b. \text{ Find the integers } a \text{ and } b \text{ such that } (2\sqrt{3} - 1)^2 = a\sqrt{3} + b \quad [3]$$

$$\Rightarrow (2\sqrt{3})^2 - 2 \times 2\sqrt{3} + 1 = a\sqrt{3} + b$$

$$12 - 4\sqrt{3} + 1 = a\sqrt{3} + b$$

$$-4\sqrt{3} + 13 = a\sqrt{3} + b$$

$$\therefore a = -4$$

$$b = 13$$

Question 7 (15 marks)

a. Solve:

(i) $|4x - 3| = 5$

[2]

$$\begin{aligned} 4x - 3 &= 5 \quad \text{or} \quad 4x - 3 = -5 \\ 4x &= 8 & 4x &= -2 \\ x &= 2 & x &= -\frac{1}{2} \\ \therefore x &= 2, -\frac{1}{2} \end{aligned}$$

(ii) $5x - \frac{10}{x} = 4$

[2]

$$\begin{aligned} 5x^2 - 10 &= 4x \\ 5x^2 - 4x - 10 &= 0 \\ x &= \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \\ &= \frac{4 \pm \sqrt{216}}{10} \\ &= \frac{4 \pm 6\sqrt{6}}{10} = \frac{2 \pm 3\sqrt{6}}{5} \end{aligned}$$

b. Find the values of k for which the equation $x^2 + (k - 6)x + 1 = 0$ has equal roots.

[3]

$$\begin{aligned} \text{equal roots} &\Rightarrow b^2 - 4ac = 0 \\ \text{i.e. } (k-6)^2 - 4 &= 0 \\ (k-6)^2 &= 4 \\ k-6 &= \pm 2 \\ k &= 4 \text{ or } k = 8 \end{aligned}$$

c. A circle has the equation $x^2 - 2x + y^2 + 6y = 6$.

- (i) Find the radius and the coordinates of the centre of the circle. [3]

$$\begin{aligned}x^2 - 2x + 1 + y^2 + 6y + 9 &= 6 + 1 + 9 \\(x - 1)^2 + (y + 3)^2 &= 16 \\ \text{centre} &= (1, -3) \\ \text{radius} &= 4\end{aligned}$$

- (ii) Sketch the circle, clearly showing the centre and radius. [2]

d. A function $y = f(x)$ is defined as:

$$f(x) = \begin{cases} x-3 & \text{for } x \leq -3 \\ 2x+2 & \text{for } -3 < x < 0 \\ x^2 & \text{for } x \geq 0 \end{cases}$$

(i) Evaluate $f(-7)$ [1]

$$= -7-3$$

$$= -10$$

(ii) Evaluate $f(2) + f(-2) + f(-5)$ [2]

$$= 2^2 + (2(-2)+2) + (-5-3)$$

$$= 4 + (-2) + (-8)$$

$$= -6$$

Question 8 (14 marks)

a. Differentiate $f(x) = x^2 - 4x$ from first principles. [3]

$$f(x+h) = (x+h)^2 - 4(x+h)$$

$$= x^2 + 2xh + h^2 - 4x - 4h$$

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$$

$$= \lim_{h \rightarrow 0} \frac{x^2 + 2xh + h^2 - 4x - 4h - x^2 + 4x}{h}$$

$$= \lim_{h \rightarrow 0} \frac{2xh + h^2 - 4h}{h}$$

$$= \lim_{h \rightarrow 0} 2x + h - 4$$

$$f'(x) = 2x - 4$$

b. Differentiate:

(i) $y = 5 - 7x + 13x^4$ [1]

$$\frac{dy}{dx} = -7 + 52x^3$$

(ii) $y = 2\sqrt{x} = 2x^{\frac{1}{2}}$ [2]

$$\begin{aligned}\frac{dy}{dx} &= 2 \times \frac{1}{2} x^{-\frac{1}{2}} \\ &= \frac{1}{\sqrt{x}}\end{aligned}$$

(iii) $y = (2x - 3)^8$ [2]

$$\begin{aligned}\frac{dy}{dx} &= 8(2x-3)^7 \cdot 2 \\ &= 16(2x-3)^7\end{aligned}$$

(iv) $y = x(1-x)^6$ [3]

$\frac{dy}{dx} = vu' + uv'$	$u = x$
	$u' = 1$
$= (1-x)^6 + x(-6(1-x)^5)$	$v = (1-x)^6$
$= (1-x)^5 [(1-x) - 6x]$	$v' = -6(1-x)^5$
$= (1-x)^5 (1-7x)$	

(v) $y = \frac{x^2 + 2}{3x - 4}$

[3]

$$\frac{dy}{dx} = \frac{vu' - uv'}{v^2}$$

$$= \frac{(3x - 4)(2x) - (x^2 + 2)(3)}{(3x - 4)^2}$$

$$= \frac{6x^2 - 8x - 3x^2 - 6}{(3x - 4)^2}$$

$$= \frac{3x^2 - 8x - 6}{(3x - 4)^2}$$

$$u = x^2 + 2$$

$$u' = 2x$$

$$v = 3x - 4$$

$$v' = 3$$

Question 9 (15 marks)

- a. The line l_1 passes through the point $(9, -4)$ and has gradient $\frac{1}{3}$.

(i) Find the equation of l_1 in general form.

[2]

$$y - y_1 = m(x - x_1)$$

$$y + 4 = \frac{1}{3}(x - 9)$$

$$3y + 12 = x - 9$$

$$l_1: x - 3y - 21 = 0$$

(ii) Line l_2 passes through the origin and has gradient -2 .

Find the coordinates of P , the point of intersection of lines l_1 and l_2 . [2]

$$l_2: y = -2x \quad ; \quad l_1: x - 3y - 21 = 0$$

Solving l_1 and l_2 simultaneously

$$x - 3(-2x) - 21 = 0$$

$$7x - 21 = 0$$

$$7x = 21$$

$$x = 3$$

$$\therefore P = (3, -6)$$

(iii) Given that l_1 crosses the y -axis at the point C ,

calculate the area of $\triangle OPC$.

[3]

(You may draw a diagram in the space below to help you answer the question)

$$\text{At } C, x = 0 \Rightarrow -3y - 21 = 0$$

$$y = -7 \quad \therefore C = (0, -7)$$

Area of $\triangle OPC$

$$= \frac{1}{2} \times 7 \times 3$$

$$= \frac{21}{2} \text{ square units}$$

$\checkmark \quad \theta > 90^\circ \Rightarrow \text{cosine is negative}$

b. Given that $\sin \theta = \frac{5}{6}$ and $90^\circ \leq \theta \leq 180^\circ$, find the value of $\cos \theta$. [2]

$$\begin{aligned} \text{Adjacent side} &= \sqrt{6^2 - 5^2} \\ &= \sqrt{11} \end{aligned}$$

$$\cos \theta = \frac{-\sqrt{11}}{6}$$

c. Solve: $\tan x = \frac{1}{\sqrt{3}}$ for $0 \leq x \leq 360^\circ$ [2]

$\tan$ is positive in Q1, Q3

$$\therefore x = 30^\circ, (180 + 30^\circ)$$

$$= 30^\circ, 210^\circ$$

d. Prove that $\frac{\sec \theta}{\cot \theta + \tan \theta} - \frac{1 + \cot \theta}{\operatorname{cosec} \theta} = -\cos \theta$ [4]

$$\text{LHS} = \frac{\sec \theta}{\cot \theta + \tan \theta} - \frac{1 + \cot \theta}{\operatorname{cosec} \theta}$$

$$= \frac{\frac{1}{\cos \theta}}{\frac{\cos \theta}{\sin \theta} + \frac{\sin \theta}{\cos \theta}} - \frac{1 + \frac{\cos \theta}{\sin \theta}}{\frac{1}{\sin \theta}} \quad \begin{array}{l} \times \sin \theta \cos \theta \\ \times \sin \theta \cos \theta \end{array}$$

$$= \frac{\sin \theta}{\cos^2 \theta + \sin^2 \theta} - \left(\frac{\sin \theta \cos \theta + \cos^2 \theta}{\cos \theta} \right)$$

$$= \frac{\sin \theta}{1} - \left(\frac{\cancel{\cos \theta} (\sin \theta + \cos \theta)}{\cancel{\cos \theta}} \right)$$

$$= \sin \theta - \sin \theta - \cos \theta$$

$$= -\cos \theta$$

$$= \text{RHS.}$$

Question 10(13 marks)

- a. Find the value of x where $BD = 55$ cm.

[3]

Answer correct to 3 significant figures.

$$\angle ADC = \angle DBC + \angle DCB \quad (\text{exterior } \angle \text{ of } \triangle = \text{sum of interior opposite } \angle s)$$
$$\therefore \angle DCB = 40^\circ - 30^\circ = 10^\circ$$

In $\triangle BCD$

$$\frac{DC}{\sin 30^\circ} = \frac{55}{\sin 10^\circ}$$

$$DC = \frac{55}{2 \sin 10^\circ}$$

In $\triangle ADC$,

$$\sin 40^\circ = \frac{x}{DC}$$

$$x = DC \sin 40^\circ$$
$$= \frac{55 \sin 40^\circ}{2 \sin 10^\circ}$$

$$x = 102 \text{ cm (to 3 sig figs)}$$

- b. A newly launched weather balloon is floating in the air vertically h metres above the point P on the ground. Observer A is due south of the balloon and notes that its angle of elevation is 58° . Observer B is 150 metres from Observer A and due east of the weather balloon. The angle of elevation of the weather balloon from Observer B is 67° .

- (i) Show that $PA = h \cot 58^\circ$ and $PB = h \cot 67^\circ$. [2]

$$\tan 58^\circ = \frac{h}{PA}$$

$$\tan 67^\circ = \frac{h}{BP}$$

$$PA = \frac{h}{\tan 58^\circ}$$

$$BP = \frac{h}{\tan 67^\circ}$$

$$= h \cot 58^\circ$$

$$= h \cot 67^\circ$$

- (ii) Use Pythagoras' Theorem to show that $h^2 = \frac{150^2}{\cot^2 58^\circ + \cot^2 67^\circ}$ [2]

$$PA^2 + PB^2 = 150^2$$

$$(h \cot 58^\circ)^2 + (h \cot 67^\circ)^2 = 150^2$$

$$h^2 (\cot^2 58^\circ + \cot^2 67^\circ) = 150^2$$

$$h^2 = \frac{150^2}{\cot^2 58^\circ + \cot^2 67^\circ}$$

- (iii) Hence, find h correct to one decimal place. [1]

$$h = 198.6 \text{ m}$$

- c. A small segment of a circle has been removed as shown below.
The circle has a centre O and radius 0.9 metres.
The length of the straight edge AB is also 0.9 metres.

Not to scale

- (i) Explain why $\angle AOB = \frac{\pi}{3}$ [1]

$$AB = 0.9 \text{ m (given)}$$

$$OA = OB = 0.9 \text{ m (radii)}$$

$\therefore \Delta AOB$ is equilateral (all sides $=$)

$\therefore \angle AOB = \frac{\pi}{3}$ (all $\angle$ s of equilateral $\Delta =$)

- (ii) Find the area of ΔAOB . [1]

$$A_{\Delta AOB} = \frac{1}{2} r^2 \sin \theta$$

$$= \frac{1}{2} \times (0.9)^2 \times \sin \frac{\pi}{3}$$

$$= 0.351 \text{ m}^2 \text{ (to 3dp)}$$

- (iii) Find the area of the minor sector AOB . [1]

$$A = \frac{1}{2} r^2 \theta$$

$$= \frac{1}{2} \times (0.9)^2 \times \frac{\pi}{3}$$

$$= 0.424 \text{ m}^2 \text{ (to 3dp)}$$

(iv) Hence, find the area of the shaded region.

[2]

A of minor segment (unshaded)

$$= A \text{ of minor sector} - A \text{ of } \triangle AOB$$

$$= 0.073 \text{ m}^2$$

Shaded Area = A of circle - A of minor segment

$$= \pi (0.9)^2 - 0.073$$

$$= 2.472 \text{ m}^2 \text{ (to 3 dp)}$$

Question 11 (17 marks)

a. Simplify:

$$\left(\frac{12x^{-3}y^2}{xyz^{\frac{1}{2}}} \right)^2 \div \frac{6x^2y^3}{z^{-4}}$$

[3]

$$= \frac{144 x^{-6} y^4}{x^2 y^2 z} \times \frac{z^{-4}}{6 x^2 y^3}$$

$$= \frac{144 y^4}{x^8 y^2 z} \times \frac{1}{6 x^2 y^3 z^4}$$

$$= \frac{24}{x^{10} y z^5}$$

b. Solve:

(i) $5^{1-x} = 25^x$ [2]

$$5^{1-x} = 5^{2x}$$

$$1-x = 2x$$

$$3x = 1$$

$$x = \frac{1}{3}$$

(ii) $\log_4(2x) - \log_4(x+1) = 0$ [2]

$$\log_4\left(\frac{2x}{x+1}\right) = 0$$

$$\frac{2x}{x+1} = 4^0$$

$$2x = x+1$$

$$x = 1$$

c. Given that $\log_a 4 = 1.5$ and $\log_a 5 = 1.7$, find:

(i) $\log_a 1.25$ [1]

$$= \log_a\left(\frac{5}{4}\right)$$

$$= \log_a 5 - \log_a 4$$

$$= 1.7 - 1.5$$

$$= 0.2$$

(ii) $\log_a 2$ [1]

$$= \log_a 4^{\frac{1}{2}}$$

$$= \frac{1}{2} \log_a 4$$

$$= \frac{1}{2} \times 1.5$$

$$= 0.75$$

(iii) $\log_a 100$

[2]

$$= \log_a (5^2 \times 4)$$

$$= 2 \log_a 5 + \log_a 4$$

$$= 2(1.7) + 1.5$$

$$= 4.9$$

d. Differentiate $y = \frac{e^{2x} + 4}{x^3}$

[3]

$$\frac{dy}{dx} = \frac{vu' - uv'}{v^2}$$

$$= \frac{x^3(2e^{2x}) - (e^{2x} + 4)(3x^2)}{(x^3)^2}$$

$$= \frac{x^2 [2xe^{2x} - 3(e^{2x} + 4)]}{x^6}$$

$$u = e^{2x} + 4$$

$$u' = 2e^{2x}$$

$$v = x^3$$

$$v' = 3x^2$$

$$= \frac{2xe^{2x} - 3e^{2x} - 12}{x^4}$$

- e. Find the equation of the tangent to the curve $y = e^{1-2x}$
at the point where $x = 0.5$

[3]

$$\frac{dy}{dx} = -2e^{1-2x}$$

When $x = 0.5$;

$$\frac{dy}{dx} = -2e^{1-2(0.5)} \text{ and } y = e^{1-2(0.5)} \\ = -2 \qquad \qquad \qquad = 1 \\ \text{pt } (0.5, 1)$$

Equation of tangent is

$$y - y_1 = m(x - x_1)$$

$$y - 1 = -2(x - 0.5)$$

$$y - 1 = -2x + 1$$

$$2x + y - 2 = 0$$

Question 12 (11 marks)

- a. A tank initially has 3000 litres of water and is leaking according to the formula

$$V = V_0 e^{-0.135t} \text{ where } t \text{ is in hours.}$$

- (i) Find the value of V_0 . [1]

$$\text{Initially } \Rightarrow t=0, V=3000$$

$$\therefore 3000 = V_0 e^0$$

$$V_0 = 3000 \text{ litres}$$

- (ii) Find the value of V after 5 hours. [1]

Give your answer correct to 1 decimal place.

$$\text{when } t=5, V = 3000 e^{-0.135(5)}$$

$$= 1527.5 \text{ litres}$$

- (iii) Find the time taken for the volume of water to fall to 250 litres. [3]
Give your answer to the nearest minute.

$$V=250, t=?$$

$$250 = 3000 \times e^{-0.135t}$$

$$e^{-0.135t} = \frac{1}{12}$$

$$-0.135t = \log_e \left(\frac{1}{12} \right)$$

$$t = \frac{\log_e \left(\frac{1}{12} \right)}{-0.135}$$

$$= 18.4067, \dots$$

$$= 18 \text{ h } 24 \text{ mins } 24 \text{ secs}$$

It takes 18h 25 mins for the volume to fall to 250 litres

- b. (i) Factorise the expression $2x^2 - x - 1$. [2]

$$= 2x^2 + x - 2x - 1$$

$$= x(2x+1) - 1(2x+1)$$

$$= (x-1)(2x+1)$$

- (ii) Hence, solve the equation

$$2\sin^2 2x - \sin 2x = 1 \text{ for } 0^\circ \leq x \leq 360^\circ. \quad [4]$$

$$2\sin^2 2x - \sin 2x - 1 = 0$$

$$(\sin 2x - 1)(2\sin 2x + 1) = 0 \quad (\text{using (i)})$$

$$\sin 2x - 1 = 0 \quad \text{or} \quad 2\sin 2x + 1 = 0$$

$$\sin 2x = 1$$

$$\sin 2x = -\frac{1}{2} \quad ; \quad 0^\circ \leq 2x \leq 720^\circ$$

$$x = 90^\circ, 450^\circ$$

$$x = 45^\circ, 225^\circ$$

$$2x = 210^\circ, 330^\circ, 570^\circ, 690^\circ$$

$$x = 105^\circ, 165^\circ, 285^\circ, 345^\circ$$

$$\therefore x = 45^\circ, 105^\circ, 165^\circ, 225^\circ, 285^\circ, 345^\circ$$
