

Name: _____
Class: 12MT3 _____
Teacher: _____

CHERRYBROOK TECHNOLOGY HIGH SCHOOL

2000 AP3

YEAR 12 HALF YEARLY HSC

MATHEMATICS 3/4 UNIT (COMMON)

*Time allowed – 1.5 HOURS
(plus 5 minutes' reading time)*

Marks

Question 1: (12 Marks)

- (a) Differentiate the following
- $\log_e(e^{3x} + 2)$
 - $x^3 \cos 3x$.
- (b) Find the following indefinite integrals:
- $\int \frac{dx}{(7x+4)^5}$.
 - $\int \sin 6x \, dx$
 - $\int 4xe^{x^2} \, dx$.
- (c) Solve for x :
- $\log_e 8 + \log_e 16 = x \log_e 2$.
- (d) Find the exact value of $\cos 105^\circ$.

Question 2: (Start a New Page) (12 Marks)

- (a) Simplify $\frac{\sin x}{\cos x - \sin x} + \frac{\sin x}{\cos x + \sin x}$
- (b) Simplify $\sec x + \tan x$, in terms of t , where $t = \tan \frac{x}{2}$.
- (c) Use the substitution $u = x^2 - 1$ to find $\int x^3(x^2 - 1)dx$
- (d) Consider the curve $y = \sin x$, for $0 \leq x \leq 2\pi$.
For what values of x is the gradient equal to $\frac{1}{2}$?

DIRECTIONS TO CANDIDATES:

- * Attempt ALL questions.
- * The value for each question is indicated
- * All necessary working should be shown in every question.
Full marks may not be awarded for careless or badly arranged work.
- * Standard Integrals are provided. Approved calculators may be used.
- * Each question attempted is to be returned on a new page clearly marked Question 1, Question 2, etc or the top of the page.

***Each page must show your class and your name.**

Question 3:	(Start a New Page) (12 Marks)	Marks
(a)	The quartic expression $x^4 + ax^2 + b$ has factors $(x+1)$ and $(x-2)$. Find the values of a and b .	3
(b)	If $z = c$ is a double root of $P(x)$, show that $x = c$ is a root of $P'(x)$.	3
(c)	p , q and r are the roots of the cubic equation $x^3 + 2x^2 + 3x + 5 = 0$. Evaluate: (i) $p + q + r$. (ii) $p^{-1} + q^{-1} + r^{-1}$.	4
(d)	The equation $e^x - 4x - 8 = 0$ has a root close to $x = 3$. Using 3 as a first approximation and one application of Newton's Method to find a better approximation for this root. Give your answer correct to three decimal places.	2
Question 4:	(Start a New Page) (12 Marks)	
(a)	(i) Find R and α such that $2 \cos \theta - \sin \theta = R \cos(\theta + \alpha)$. (Note: $R > 0$ and $0^\circ < \alpha < 90^\circ$.) (ii) Hence, solve $2 \cos \theta = \sin \theta + 1$, for $0^\circ \leq \theta \leq 360^\circ$	4
(b)	The curve $y = \cos x$, from $-\frac{\pi}{2} \leq x \leq \frac{\pi}{2}$, is rotated about the x -axis. Find the volume of the solid formed. Leave your answer in exact form.	4
(c)	(i) Find $\frac{d}{dx}(x \log_e x)$. (ii) Prove that $\int_e^{e^2} \frac{1 + \log_e x}{x \log_e x} dx = 1 + \log_e 2$.	4
Question 5:	(Start a New Page) (9 Marks)	
(a)	(i) Sketch $y = \sin 2x$, for $0 \leq x \leq 2\pi$ (ii) By drawing a suitable straight line, state the number of values of x , in this domain, such that $\sin 2x = \frac{x}{2\pi}$. (iii) Can there be further solutions beyond $x = 2\pi$? Briefly justify your answer.	4
(b)	$A(t, e^t)$ and $B(-t, e^{-t})$ are points on the curve $y = e^x$ and $t > 0$. The tangents at A and B form an angle of 45° . (i) Prove that $e^t - \frac{1}{e^t} = 2$. (ii) Solve this equation to show that $e^t = 1 + \sqrt{2}$.	5
Question 6:	(Start a New Page) (10 Marks)	
		10
	A straight line passes through the point $(1, 2)$ and meets the x and y axes at P and Q respectively, as shown. The angle OPQ is θ . (a) Show that the equation of the line PQ is given by $y = \tan \theta + 2 - x \tan \theta$. (b) Show that the area A of $\triangle OPQ$ is given by $A = \frac{\tan \theta}{2} + 2 + \frac{2}{\tan \theta}$. (c) Prove that the area is a minimum when $\tan \theta = 2$. (d) Hence, find the minimum area.	

End of Exam

Question 1

a) $y = \log_e (e^{3x} + 2)$

$$\frac{dy}{dx} = \frac{3e^{3x}}{e^{3x} + 2} \quad (1)$$

(11) $y = x^3 \cos 3x$
 $y' = \cos 3x \times (3x^2) + x^3 \times (-3 \sin 3x)$
 $= 3x^2 (\cos 3x - x \sin 3x)$

b) (1) $\int \frac{dx}{(7x+4)^5}$
 $= \int (7x+4)^{-5} dx$
 $= \frac{(7x+4)^{-4}}{-4 \times 7} + c$
 $= \frac{-1}{28(7x+4)^4} + c$

(11) $\int \sin 6x dx$
 $= -\frac{\cos 6x}{6} + c \quad (1)$

(11) $\int 4xe^{x^2} dx$
 $= 2 \times \int 2xe^{x^2} dx$
 $= 2e^{x^2} + c \quad (1)$

$\log_a 8 + \log_a 16 = x \log_a 2$
 $3 \log_a 2 + 4 \log_a 2 = x \log_a 2 \quad (1)$
 $7 \log_a 2 = x \log_a 2$
 $\therefore x = 7 \quad (1)$

Question 1 (cont)

d) $\cos 105^\circ$
 $= \cos (60^\circ + 45^\circ)$
 $= \cos 60^\circ \cos 45^\circ - \sin 60^\circ \sin 45^\circ$
 $= \frac{1}{2} \times \frac{1}{\sqrt{2}} - \frac{\sqrt{3}}{2} \cdot \frac{1}{\sqrt{2}}$
 $= \frac{1 - \sqrt{3}}{2\sqrt{2}} \quad (1)$
 $\left[= \frac{\sqrt{2}(1 - \sqrt{3})}{4} \right]$

Question 2

a) $\frac{\sin x}{\cos x - \sin x} + \frac{\sin x}{\cos x + \sin x}$
 $= \frac{\sin (\cos x + \sin x + \cos x - \sin x)}{(\cos x - \sin x)(\cos x + \sin x)} \quad (1)$
 $= \frac{2 \sin x \cos x}{\cos^2 x - \sin^2 x}$
 $= \frac{\sin 2x}{\cos 2x} \quad (1)$
 $= \tan 2x \quad (1)$

b) $\sec x + \tan x$
 $= \frac{1+t^2}{1-t^2} + \frac{2t}{1-t^2} \quad (1)$
 $= \frac{1+2t+t^2}{1-t^2}$
 $= \frac{(1+t)^2}{1-t^2} \quad (1)$
 $= \frac{(1+t)^2}{(1+t)(1-t)} = \frac{1+t}{1-t} \quad (1)$

Question 2 (cont)

c) $u = x^2 - 1$
 $\frac{du}{dx} = 2x$
 $\frac{du}{2} = x dx \quad (1)$
 And $x^2 = u + 1$

Now $\int x^3 (x^2 - 1) dx$
 $= \int x^2 (x^2 - 1) x dx$
 $= \int (u+1) \cdot u \cdot \frac{du}{2}$
 $= \frac{1}{2} \int (u^2 + u) du$
 $= \frac{1}{2} \left(\frac{u^3}{3} + \frac{u^2}{2} \right) + c \quad (1)$
 $= \frac{u^2}{2} \left(\frac{1}{3} + \frac{1}{2} \right) + c$
 $= \frac{u^2}{2} \left(\frac{2u+1}{6} \right) + c$
 $= \frac{(x^2-1)^2 (2(x^2-1)+3)}{12} + c$
 $= \frac{(x^2-1)^2 (2x^2+1)}{12} + c \quad (1)$

Question 2 (cont)

d) $y = \sin x$
 $\frac{dy}{dx} = \cos x \quad (1)$
 $\cos x = \frac{1}{2} \quad (1)$
 when $x = \frac{\pi}{3}, 2\pi - \frac{\pi}{3}$
 $= \frac{\pi}{3}, 5\frac{\pi}{3} \quad (1)$

Question 3

a) $P(x) = x^4 + ax^2 + b$
 $P(-1) = 0$
 $\therefore 1 + a + b = 0 \quad (1)$
 $b = -a - 1$
 and $P(2) = 0$
 $16 + 4a + b = 0 \quad (2)$
 Sub. in (1)
 $\therefore 16 + 4a - a - 1 = 0$
 $15 + 3a = 0$
 $a = -5$
 $\therefore b = 4 \quad (1)$

b) $P(x) = (x-c)^2 \cdot Q(x) \quad (1)$
 $\therefore P'(x) = Q(x) \cdot 2(x-c)$
 $+ (x-c)^2 \cdot Q'(x) \quad (1)$
 $= (x-c)[2 \cdot Q(x) + (x-c)Q'(x)]$
 $\therefore x=c$ is a root of $P'(x) \quad (1)$

Question 3 (cont)

c)

$$x^2 + 2x^2 + 3x + 5 = 0$$

$$a=1, b=2, c=3, d=5$$

$$i) p+q+r = -\frac{b}{a}$$

$$= -2$$

(1)

$$ii) p^{-1} + q^{-1} + r^{-1}$$

$$= \frac{1}{p} + \frac{1}{q} + \frac{1}{r}$$

$$= \frac{qr + pr + pq}{pqr}$$

(1)

$$= \frac{c}{-d/a}$$

$$= -\frac{c}{d}$$

(1)

$$= -\frac{3}{5}$$

(1)

$$d) f(x) = e^x - 4x - 8$$

$$f'(x) = e^x - 4$$

$$a_2 = a_1 - \frac{f(a_1)}{f'(a_1)}$$

(1)

$$= 3 - \frac{f(3)}{f'(3)}$$

$$= 3 - \frac{e^3 - 20}{e^3 - 4}$$

(1)

$$= 2.99468...$$

$$= 2.995 \text{ (3dp)}$$

Question 4

$$a) i) R = \sqrt{2^2 + 1^2}$$

$$= \sqrt{5}$$

(1)

$$\therefore \frac{2}{\sqrt{5}} \cos \theta = \frac{1}{\sqrt{5}} \sin \theta$$

$$= \cos \theta \cos 2 = \sin \theta \sin 2$$

$$\therefore \cos 2 = \frac{2}{\sqrt{5}}$$

$$2 = 26^\circ 34'$$

(1)

$$\therefore R = \sqrt{5}, \quad 2 = 26^\circ 34'$$

$$ii) 2 \cos \theta - \sin \theta = 1$$

$$\sqrt{5} \cos(\theta + 2) = 1$$

$$\cos(\theta + 2) = \frac{1}{\sqrt{5}}$$

(1)

$$(\theta + 2) = 63^\circ 26', 296^\circ 34'$$

$$\theta = 63^\circ 26' - 26^\circ 34'$$

$$296^\circ 34' - 26^\circ 34'$$

$$\theta = 36^\circ 52', 270^\circ$$

(1)

$$b) V = \pi \int_{-\frac{\pi}{2}}^{\frac{\pi}{2}} \cos^2 x \, dx$$

(1)

$$= 2\pi \int_0^{\frac{\pi}{2}} \cos^2 x \, dx$$

$$= 2\pi \int_0^{\frac{\pi}{2}} \frac{\cos 2x + 1}{2} \, dx$$

(1)

$$= \pi \int_0^{\frac{\pi}{2}} (\cos 2x + 1) \, dx$$

$$= \pi \left[\frac{\sin 2x}{2} + x \right]_0^{\frac{\pi}{2}}$$

(1)

$$= \pi \left(\frac{\sin \pi}{2} + \frac{\pi}{2} \right) = \frac{\pi^2}{2}$$

(1)

Question 4 (cont)

i) (1)

$$\frac{d}{dx} (x \log_e x)$$

$$= (\log_e x) \times 1 + x \times \frac{1}{x}$$

$$= 1 + \log_e x$$

(1)

$$ii) \int_e^{e^2} \frac{1 + \log_e x}{x \log_e x} \, dx$$

$$= \left[\log_e (x \log_e x) \right]_e^{e^2}$$

(1)

$$= \log_e (e^2 \cdot 2) - \log_e (e)$$

$$= \log_e e^2 + \log_e 2 - 1$$

(1)

$$= 2 + \log_e 2 - 1$$

$$= 1 + \log_e 2$$

(1)

Question 5

a) i)

ii) There are 4 values (1)

iii) No. $\frac{x}{2\pi} > 1$ when $x > 2\pi$ (1)

$\therefore$ no further solutions because max. value of $\sin 2x$ is 1.

Question 5 (cont)

b)

(i) Let θ = angle between the tangents.

$$\text{At } A, m_1 = e^t$$

$$B, m_2 = e^{-t} \quad \left. \vphantom{\begin{matrix} \text{At } A, \\ B, \end{matrix}} \right\} (1)$$

$$\therefore \tan \theta = \left| \frac{e^t - (e^{-t})}{1 + e^t \cdot e^{-t}} \right| \quad (1)$$

$$1 = \frac{e^t - e^{-t}}{2}$$

$$\text{i.e. } 2 = e^t - e^{-t}$$

$$\text{or } e^t - \frac{1}{e^t} = 2 \quad (1)$$

$$(ii) e^t - \frac{1}{e^t} - 2 = 0$$

$$(e^t)^2 - 2e^t - 1 = 0 \quad (1)$$

$$\therefore e^t = \frac{2 \pm \sqrt{4+4}}{2} \quad \left(\frac{1}{2} \right)$$

$$= 1 \pm \sqrt{2} \quad \left(\frac{1}{2} \right)$$

(Quest 6 on next page)

Question 6

For PQ $m = -\tan\theta$ (1)

Now, $y - y_1 = m(x - x_1)$

$y - 2 = -\tan\theta (x - 1)$

$y - 2 = -x\tan\theta + \tan\theta$

OR $y = 2 + \tan\theta - x\tan\theta$ (1)

b) $A = \frac{1}{2} \times OP \times OQ$

At P $y = 0$

$\therefore 0 = \tan\theta + 2 - x\tan\theta$

$x\tan\theta = \tan\theta + 2$

$x = 1 + \frac{2}{\tan\theta}$ (1)

$\therefore OP = 1 + \frac{2}{\tan\theta}$

At Q, $x = 0$

$\therefore y = 2 + \tan\theta$

$\therefore OQ = 2 + \tan\theta$ (1)

$\Rightarrow A = \frac{1}{2} \left(1 + \frac{2}{\tan\theta} \right) (2 + \tan\theta)$

$= \frac{1}{2} \left(2 + \tan\theta + \frac{4}{\tan\theta} + 2 \right)$

$= \frac{\tan\theta}{2} + 2 + \frac{2}{\tan\theta}$ (1)

Question 6 (cont)

c) Let $t = \tan\theta$

$\therefore A = \frac{t}{2} + 2 + \frac{2}{t}$

Now $\frac{dA}{dt} = \frac{1}{2} - \frac{2}{t^2}$ (1)

$\frac{d^2A}{dt^2} = \frac{4}{t^3}$ (1)

$\frac{dA}{dt} = 0$ when $\frac{1}{2} = \frac{2}{t^2}$

$t^2 = 4$

$t = \pm 2$

But $t > 0$, since $A > 0$ (1)

$\therefore$ when $t = 2$, $\frac{d^2A}{dt^2} = \frac{4}{2^3} > 0$ (1)

$\therefore$ min. value when $t = 2$

d) When $t = 2$

$A = \frac{2}{2} + 2 + \frac{2}{2}$

$= 4$ (1)

$\therefore$ Min area is 4 sq. units.
