2

$${}^{n+1}C_5 = {}^nC_4 + {}^nC_5$$

$${}^{n+1}C_{(n+1-5)} = {}^{n+1}C_5 = {}^{n+1}C_{n-4} = p + q$$

Question 14 (14 marks) Use a SEPARATE writing booklet.

- (a) An object is projected on level ground from the origin, O , with initial speed U m/s at an angle of elevation of α . At the same instant another object is projected from a point A which is h m above the origin. The second object is projected with initial speed V m/s at an angle of elevation of β , where $\beta < \alpha$.

- (i) The parametric equations of displacement for the object projected from the origin, O , are

$$x = Ut \cos \alpha \text{ and } y = Ut \sin \alpha - \frac{1}{2}gt^2$$

(DO NOT PROVE THESE)

Write down the two parametric equations of displacement for the object projected from A .

From A:

$$x = Vt \cos \beta$$

$$y = Vt \sin \beta - \frac{1}{2}gt^2 + h$$

- (ii) If the objects collide T seconds after they are projected, show that

$$T = \frac{h \cos \beta}{U \sin(\alpha - \beta)}.$$

When collide at $t=T$, both x & y are equal.

For x :

$$VT \cos \beta = UT \cos \alpha$$

$$\therefore V = \frac{U \cos \alpha}{\cos \beta}$$

① for equating x or y

①

For y :

$$VT \sin \beta - \frac{1}{2} g T^2 + h = UT \sin \alpha - \frac{1}{2} g T^2$$

$$h = UT \sin \alpha - VT \sin \beta$$

①

$$h = T(U \sin \alpha - V \sin \beta)$$

$$= T \left(U \sin \alpha - \frac{U \cos \alpha \sin \beta}{\cos \beta} \right)$$

$$h = UT \left(\frac{\sin \alpha \cos \beta - \cos \alpha \sin \beta}{\cos \beta} \right)$$

①

$$h = UT \frac{\sin(\alpha - \beta)}{\cos \beta}$$

$$\frac{h \cos \beta}{U \sin(\alpha - \beta)} = T$$

①

- (ii) What is the concentration of the pollutant in the pond after 10 days?

$$\frac{dm}{dt} = 150 - \frac{1}{15} m$$

$$\frac{dm}{dt} = \frac{2250 - m}{15}$$

$$\frac{1}{2250 - m} dm = \frac{1}{15} dt$$

$$\int \frac{1}{2250 - m} dm = \int \frac{1}{15} dt$$

$$-\ln|2250 - m| = \frac{t}{15} + C$$
