$P(a, 2a)$, $Q(-a, 5a)$, $R(3a, 4a)$, $S(9a, 12a)$
 Length of projection is 12 ← scalar

$$i) \vec{PQ} = \begin{pmatrix} -a-a \\ 5a-2a \end{pmatrix} \therefore \vec{PQ} = -2a\hat{i} + 3a\hat{j} \\ = \begin{pmatrix} -2a \\ 3a \end{pmatrix}$$

ii) METHOD 1: scalar projection of $\vec{PQ}$ onto $\vec{RS}$

$$\text{Scalar}_{\text{proj}} = \frac{\vec{PQ} \cdot \vec{RS}}{|\vec{RS}|} \quad \vec{RS} = \begin{pmatrix} 9a-3a \\ 12a-4a \end{pmatrix} = \begin{pmatrix} 6a \\ 8a \end{pmatrix} = 6a\hat{i} + 8a\hat{j}$$

$$\text{Dot product } \vec{PQ} \cdot \vec{RS} = -2a \times 6a + 3a \times 8a \\ = -12a^2 + 24a^2 \\ = 12a^2$$

$$|\vec{RS}| = \sqrt{(6a)^2 + (8a)^2} \\ = \sqrt{36a^2 + 64a^2} \\ = \sqrt{100a^2} \\ = 10a \quad (\text{as } a > 0, \text{ given})$$

$$\therefore \frac{\vec{PQ} \cdot \vec{RS}}{|\vec{RS}|} = \frac{12a^2}{10a} \quad \text{however scalar projection of } \vec{PQ} \text{ onto } \vec{RS} \text{ is } 12 \text{ (given)}$$

$$12 = \frac{6a}{5}$$

$$a = 10$$

METHOD 2: using vector projection (not scalar)

$$\text{Vector}_{\text{proj}} = \frac{\vec{PQ} \cdot \vec{RS}}{|\vec{RS}|^2} \cdot \vec{RS}$$

$$= \frac{\begin{pmatrix} -2a \\ 3a \end{pmatrix} \begin{pmatrix} 6a \\ 8a \end{pmatrix} (6a\hat{i} + 8a\hat{j})}{(6a)^2 + (8a)^2} \quad \leftarrow \text{as per method 1}$$

$$= \frac{-12a^2 + 24a^2}{36a^2 + 64a^2} (6a\hat{i} + 8a\hat{j})$$

$$= \frac{12a^2}{100a^2} (6a\hat{i} + 8a\hat{j})$$

$$= \frac{3}{25} (6a\hat{i} + 8a\hat{j})$$

$$= \frac{18a\hat{i}}{25} + \frac{24a}{25} \hat{j}$$

Given projection length is 12

$$12 = \sqrt{\left(\frac{18a}{25}\right)^2 + \left(\frac{24a}{25}\right)^2}$$

$$12 = \sqrt{\frac{900a^2}{25^2}}$$

$$12 = \frac{30a}{25}$$

$$\frac{6a}{5} = 12$$

$$6a = 60$$

$$a = 10$$

Prove $2^{n+1}(5+7^n)$ is divisible by 6 for all n ,
positive integers

1) Prove statement true for $n=1$

$$\text{LHS} = 2^{1+1}(5+7^1)$$

$$= 2^2(12)$$

$$= 4 \times 2 \times 6 \text{ which is divisible by } 6$$

$\therefore$ true for $n=1$

2) Assume statement true for $n=k$

$$2^{k+1}(5+7^k) = 6M \quad \text{where } M \& k \text{ are positive integers}$$

$$2^{k+1} \times 5 = 6M - 7^k(2^{k+1})$$

3) Prove statement true for $n=k+1$

$$2^{k+1+1}(5+7^{k+1}) = 6Q \quad \text{where } Q \text{ is a positive integer}$$

$$\text{LHS} = 2^{k+1+1}(5+7^{k+1})$$

$$= 2^{k+2}(5+7^{k+1})$$

$$= 2 \cdot 2^{k+1}(5+7^1 \cdot 7^k)$$

$$= 2 \cdot 5 \cdot 2^{k+1} + 2 \cdot 7 \cdot 2^{k+1} \cdot 7^k$$

$$= 2(6M - 7^k(2^{k+1})) + 14 \cdot 2^{k+1} \cdot 7^k \quad \text{by assumption.}$$

$$= 12M - 2 \cdot 7^k \cdot 2^{k+1} + 14 \cdot 2^{k+1} \cdot 7^k$$

$$= 12M + 12 \cdot 7^k \cdot 2^{k+1}$$

$$= 12(M + 7^k \cdot 2^{k+1})$$

$$= 6 \times 2(M + 7^k \cdot 2^{k+1})$$

$$= 6Q \quad \text{where } Q = 2(M + 7^k \cdot 2^{k+1})$$

$$= \text{RHS}$$

Statement is divisible by 6 $\therefore$ is true
for $n=k+1$

4) Therefore statement is true for all
positive integers n .

Vector Question

OABC is a parallelogram and the point M is the midpoint of AB.

The point N lies on the diagonal AC so that $AN:NC = 1:2$.

Let $\vec{OA} = \underline{a}$ and $\vec{OC} = \underline{c}$.

Deduce, showing reasoning, that O, N & M are collinear.

$$\begin{aligned}\vec{AC} &= \vec{AO} + \vec{OC} \\ &= -\underline{a} + \underline{c}\end{aligned}$$

$$\begin{aligned}\vec{AN} &= \frac{1}{3}\vec{AC} \\ &= \frac{1}{3}(-\underline{a} + \underline{c})\end{aligned}$$

$$\begin{aligned}\therefore \vec{ON} &= \vec{OA} + \vec{AN} \\ &= \underline{a} + \frac{1}{3}(-\underline{a} + \underline{c}) \\ &= \underline{a} - \frac{1}{3}\underline{a} + \frac{1}{3}\underline{c} \\ &= \frac{2}{3}\underline{a} + \frac{1}{3}\underline{c} \\ &= \frac{1}{3}[2\underline{a} + \underline{c}]\end{aligned}$$

$$\begin{aligned}\vec{NM} &= \vec{NA} + \vec{AM} \\ &= -\frac{1}{3}(-\underline{a} + \underline{c}) + \frac{1}{2}\underline{c} \\ &= \frac{1}{3}\underline{a} - \frac{1}{3}\underline{c} + \frac{1}{2}\underline{c} \\ &= \frac{1}{3}\underline{a} + \frac{1}{6}\underline{c} \\ &= \frac{1}{6}[2\underline{a} + \underline{c}]\end{aligned}$$

$\therefore \vec{ON} = \vec{NM}$, ~~and~~ are in the same direction, & share the point N.

$\therefore$ O, N & M are collinear.
