$$BD = h \tan 70^\circ$$

$$CD = h \tan 66^\circ$$

$$a) ii) \text{ In } \triangle ACD$$

$$\tan \angle DAC = \frac{CD}{AD} = \frac{h \tan 66^\circ}{h \tan 73^\circ} \\ = 0.68668 \dots$$

$$\therefore \angle DAC = 34^\circ 29'$$

$$\frac{\sin B}{h \tan 73^\circ} = \frac{\sin 34^\circ 29'}{h \tan 70^\circ}$$

$$\therefore \sin B = \frac{h \tan 73^\circ \sin 34^\circ 29'}{h \tan 70^\circ} \\ = 0.674 \dots$$

$$\therefore \angle B = \angle ABD = 42^\circ 23' \text{ or } 137^\circ 37'$$

But $\angle ABD$ is obtuse (data)

$$\therefore \angle ABD = 137^\circ 37'$$

$$\therefore \angle ADB = 180^\circ - 137^\circ 37' - 34^\circ 29' \\ = 7^\circ 54'$$

$$\therefore \text{Bearing of B from D} \\ \text{is } 97^\circ 54'$$
